

## Mia-Platform mentioned in the 2025 Gartner® Hype Cycle™ for Application Architecture and Integration

**06 August 2025** – Mia-Platform has been mentioned in the 2025 Gartner® Hype Cycle™ for Application Architecture and Integration by Andrew Comes and Wei Jin as a Sample Vendor for the Digital Integration Hub category.

According to the Gartner report, “A digital integration hub (DIH) offers fast, high-volume API and event data access by consolidating and syncing multiple app sources into a data layer. It ensures scalable, 24/7 access, lightens systems-of-record (SORs) workloads, and boosts business agility, enhancing analytics, integration and composition”.

Additionally, the report states that “Digital initiatives use APIs and events to access core app data and logic. Traditional application integration approaches of directly connecting every request to the back-end application can struggle with performance, scalability and availability due to SOR overload. A DIH offers a popular alternative, enhancing business agility and resolving these challenges”.

“DIHs offer a more responsive experience than direct SOR access, reducing access fees and scaling costs by minimizing API calls to SaaS and legacy apps. They enable 24/7 operations, independent of SOR availability, and enhance business agility by decoupling the API layer. DIHs keep data current for analytics, notifications and integration”.

## ABOUT MIA-PLATFORM

Mia-Platform is an Independent Software Vendor (ISV) which delivers the leading **AI-Native Developer Platform Foundation**. The platform is designed to help large enterprises create intelligent Internal Developer Platforms that unlock self-service development, enhance DevX, and boost engineering productivity, supporting them in their adoption path of Platform Engineering, Composable Architecture paradigms and AI Agent design and management.

With a quick-to-implement, battle-tested framework that covers a wide range of use cases, Mia-Platform delivers measurable ROI from day one, while preserving the flexibility to adapt without locking enterprises into any specific technologies, ensuring scalable innovation.
