

Mia-Platform mentioned in the 2024 Gartner® Develop 3 Essential Practices for Data Management Operations

6 August 2024 – Mia-Platform has been mentioned in the 2024 Gartner® Develop 3 Essential Practices for Data Management Operations research as a Representative Platform Engineering Vendor.

This research states, “To avoid firefighting incidents and staff burnout, data and analytics leaders must redefine their data management operations. They need DataOps to streamline data delivery, platform engineering to manage data infrastructure and FinOps to optimize the use of cloud resources”.

According to the research “D&A leaders must develop three essential practices to redefine their data management operations:

- DataOps to streamline data delivery
- Platform engineering to manage data infrastructure serving as a foundation for enterprise-wide scaling of D&A deliverables
- FinOps to optimize the use of cloud resources”.

The research notes that, “the goal of platform engineering is to prevent duplicated efforts undertaken by different teams (like data engineering, data governance, analytics and AI) by managing the common metadata, security and observability of information assets within the data platforms. It optimizes developer experience and accelerates delivery by delivering platform services to the platform tenants via a self-service developer portal”.

Mia-Platform has been mentioned as a Representative Platform Engineering Vendor.
