

## Mia-Platform mentioned in the Gartner® Hype Cycle™ for Platform Engineering, 2024 Report

**21 June 2024** – Mia-Platform has been mentioned in the [Gartner Hype Cycle for Platform Engineering Report](#) by Manjunath Bhat and Bill Blosen as one of the Representative Vendors for Internal Developer Platforms Category.

According to the Gartner authors, “An internal developer platform (IDP) is a layer of tools, services, automations and information maintained as a product by a dedicated platform team. It is designed to support engineers by abstracting underlying complexity. Internal developer portals typically serve as the storefront for these platforms as part of a platform engineering capability [...]

IDPs remove the burden of underlying infrastructure construction and maintenance and increase the product teams’ capacity to dedicate time to customer value and learning. They make security, compliance and controls more consistent and simplify the wide variety of tools used to deliver software. As part of platform engineering, they also improve the developer experience, thus increasing productivity while reducing employee frustration and attrition\*.

Implementing an Internal Developer Platform can improve knowledge-sharing and collaboration within organizations, accelerating the time to market to effectively manage resources efficiently.

Mia-Platform stands as an example of how an Internal Developer Platform can improve the developer experience within organizations. With its comprehensive suite of tools and services, Mia-Platform enables developers to streamline their workflows, accelerate time-to-market, and drive innovation at scale.

By providing self-service capabilities for environment provisioning, resource management, and deployment automation, Mia-Platform supports companies fostering a culture of collaboration and knowledge sharing, empowering teams to deliver value to customers with confidence and efficiency.
